

When you need  
the most comprehensive eye care,  
**InSight Vision Center**  
has it all!

## Diagnose & Treat:

Cataracts  
Glaucoma  
Macular Degeneration  
Diabetic Retinopathy

InSight Vision Center offers the most advanced  
treatment options ever developed including  
LASIK laser vision correction and ReSTOR Multi-focal  
lens implants, which can eliminate your need for  
glasses after cataract surgery.

Our well trained staff also offers eyelid lifts,  
advanced skin laser resurfacing, laser hair removal,  
BOTOX®, Restylane®, and much more.

Appointments are offered  
during lunch hours,  
weekends and evenings.

For a free LASIK  
consultation  
and excellent medical  
services call

**InSight**  
Vision Center  
Advanced care focused on you.

**559-449-5050**

## BREAKTHROUGH IN CATARACT CARE

*Cataract surgery has entered a new era,  
with the possibility of completely  
eliminating your need for glasses or  
contact lenses forever.*

A cataract is a clouding of the natural lens in the eye. This lens is located behind the pupil. As the lens becomes cloudy, you begin to have blurry vision, glare, decreased night vision, or loss of vibrant colors. If you have any of these symptoms, you should be examined for cataracts. Cataract surgery is the only effective treatment. Unfortunately, no medication, herb, or supplement has ever been proven to relieve cataracts.

You may recall your parent's or grandparent's cataract surgery – the healing process was lengthy and they may have needed thick glasses to see afterwards. New techniques have dramatically reduced the healing time, with most people resuming their normal activities the day after surgery. Also, the advent and development of lens implants have provided much better vision after cataract surgery.

But until recently, even standard lens implants could not fully eliminate your need for glasses after cataract surgery.

A new day has dawned in cataract care! The new ReSTOR lens implant can completely eliminate your need for glasses after cataract surgery.\* How is this lens implant different from what you've heard about before? It is multifocal. That means the lens allows you to focus at distance and near. The ReSTOR lens allows you to see distance and near clearly, so you can drive, watch a movie, do computer work or read without the need for glasses or contact lenses ever again.

Only certain doctors have been trained to use the powerful new technology. Medicare and most insurers now cover elements of cataract surgery using the ReSTOR lens. For more information about the ReSTOR lens and for the most advanced cataract care, call Eric J. Poulsen, MD or Larry R. Lawrence, MD at (559) 449-5050. They can give you a complete evaluation to determine if you're a candidate for this unprecedented new technology and discuss the advantages and disadvantages in detail with you.

\* In the clinical trial, 80% of patients never wore glasses for any activity after having the ReSTOR lens implant.
